DIVINITÁ™, GROUNDBREAKING NUTRITIONAL SUPPLEMENT

We have received the following information from the producer in Slovenia. If you have any specific, substantive questions regarding the information below, we kindly ask you to ask them via our contact page. We will then do our utmost to answer your question to your satisfaction as soon as possible.

DIVINITÁ™ does not conflict with other classic medical, dietary or alternative medicines or therapies. Rather, it can have a supportive effect like CBD, for example. There is no toxic or lethal dose – there is no possibility of overdose. The organism recognizes DIVINITÁ™ as its own substance. There is no possibility of addiction. DIVINITÁ™ does not accumulate and does not stay in the body. Active for 10 – 15 hours, after which it is completely excreted through the feces, urine and sweat.

DIVINITÁ™ is 100% natural, absolutely safe and non-toxic, with no side effects, no drug interactions and is completely eliminated from the body.

Why use DIVINITÁ™? DIVINITÁ™ has been proven to contribute to your health, prevent diseases in modern men, women and children whose bodies are full of toxins, viruses, allergens, carcinogens and other harmful substances, which adversely affect immunity, energy and vitality and may pose a major risk to health.

DIVINITÁ™ improves the functions of the immune system, alkalizes the body and neutralizes the free radicals. The basic concept of DIVINITÁ™ treatment is based on the fact that the positive effects are achieved by removing positively charged particles from the body that are usually harmful, toxic or carcinogenic substances (in the form of heavy metals, pesticides, herbicides, alphatoxins, nitrosamines, ammonia, mycotoxins, lactates, radioactive particles, UV radiation, drug by-products, contraceptives, chemotherapy, radiotherapy, drugs, alcohol, cigarettes and various oxidants, virus components, allergens and other harmful substances).

In short, DIVINITÁ™ lifts the blockade that endangers vitality. When the vital life force is released and activated, the body itself has the capacity to cure and alleviate chronic diseases. DIVINITÁ™ affirms the theory that all diseases can be cured by natural substances and that nature has a cure for everything. The traditional definition of DIVINITÁ™ as a true alchemical gift from God undoubtedly comes from there.

PREVENTIVE USE

There are people whose daily routine is constantly or occasionally stressful and demanding: managers, business people, people prone to diseases, emotionally and physically sensitive people, convalescent and the like, which makes them more exposed to stress, free radical damage, and thus more susceptible to various infectious, virus, tumor and other dangerous diseases. Preventive consumption of DIVINITÁ™ is a powerful shield against the dangers of exposure to it.

The optimal preventive amount is 0.5 grams of DIVINITÁ™ per day, which is 1 capsule per day taken, each time about 30 minutes before breakfast. Taking DIVINITÁ™ is not time-limited because it does not create addiction or habits, does not accumulate in the body and has no unwanted effects.

There are people who experience difficulties due to disturbed bodily functions. This group of people has a real need to take larger doses of DIVINITÁ™. In these cases, the daily preventive doses can be increased, even doubled. Those who decide on such increased daily doses are advised to take them regularly as it can only lead to the desired effects.

DETOXICATOR

DIVINITÁ™, as a substance for the removal of heavy metals, pesticides and chemical toxins from the body, is studied by numerous modern scientists around the world, mainly for its incredible ability to bind and remove heavy metals and other unwanted toxic chemicals from the body.

It is known that almost every person living in modern society has hundreds of strange synthetic and dangerous chemicals in their body. These enter the body through food, water and air. Studies have shown that DIVINITÁ™ can remove these chemicals, which is of great importance when it comes to the prevention of cancer, Alzheimer's, anemia, diabetes and many other modern diseases.

Modern society today throws thousands of different chemicals into the environment, 90% of which are potentially hazardous to human health. Modern man lives in a sea of pollution. Many toxins that cause cancer and are dangerous to the brain and nervous system are usually already present in the body. Today, toxins are even found in unborn children and can cause numerous diseases and damage before or after childbirth or in the growth phase.

Heavy metals such as lead, arsenic, mercury, aluminum, nickel and cadmium are absolutely undesirable in the human body. We have written a blog about this subject .

Accumulation of these toxins in fat cells, bones, endocrine glands, hair or in the central nervous system often leads to harmful health effects.

Mercury is known as a heavy carcinogenic metal poison, which hinders the functioning of the immune system and causes blockages in the autonomic nervous system. Today, modern humans are exposed to numerous sources of mercury: plants and stoves emit mercury into the air; fish in the sea and lakes have elevated mercury levels; For years, all vaccines have contained mercury, and many vaccines still contain it. By the way, one study shows that each flu vaccine increases the risk of Alzheimer's disease by 10% because these vaccines contain mercury. It has also been found that mercury amalgam, which is found in dental fillings, is a dangerous carcinogen because mercury vapours are constantly released from amalgam fillings, which are then inhaled or swallowed. In the body, they are converted into

an organic form known as "methylmercury". This can cross the natural brain barriers, which has been linked to Alzheimer's disease, multiple sclerosis, amyotrophic lateral sclerosis, and autism. These highly reactive substances cause damage to the arteries and nerve nodes. Tests on people who had candida infection showed that more than 80% of them also had elevated levels of mercury in the body.

People often do not know that they are being exposed to systemic poisoning. Many categories of workers in industry and agriculture are exposed to various toxic chemicals, gases, and substances in the course of their work. For example, exposure to arsenic is very dangerous for workers in refineries. Unfortunately, herbicides, pesticides, insecticides and other highly toxic substances are now seen as inevitable in the modern cultivation of numerous agricultural crops, fruits and vegetables. Various color sprays (for footwear) are also dangerous, which all together results in a high risk of lung and skin cancer in these employees.

Formaldehyde is a carcinogenic chemical that many people come into contact with: furniture manufacturers, hospitals and laboratories, new cars smell like formaldehyde (which many people associate with luxury, but the smell comes from car seat and carpet materials).

Benzene, diesel steam, hair dye, synthetic fibers, dyes, and other substances are also carcinogenic. Long-term exposure to their effects is associated with an increased risk of various cancers. It is estimated that work related to exposure to carcinogens causes 12% of total cancer cases.

A high correlation with the increase in the death rate due to breast cancer has been the exposure to chemicals from the environment and near toxic landfills. There are a whole host of environmental chemicals that have the ability to imitate estrogens in the human body, and are believed to be the causative agents of breast cancer.

In most modern countries, there is an increasing tendency to contaminate drinking water with numerous pollutants, including heavy metals such as lead, and viral microorganisms, fluorides, chlorides, and industrial waste.

Research shows that exposure to contaminated water increases the risk of developing carcinoma and other harmful health effects.

Staying in close proximity to nuclear power plants carries a high risk of cancer, as radioactive gases emitted by nuclear power plants contaminate the water and soil, and this has chain effects on the food chain and health, which together increases the risk of cancer.

Hazardous substances that DIVINITÁ™ eliminates include mycotoxins, and aflatoxin as a highly toxic subtype of mycotoxins, which is associated with stomach, kidney and liver carcinoma.

Aflatoxins multiply rapidly due to the negative effect of radioactive radiation on saprophytic bacteria, which under normal conditions control the development of aflatoxins.

It is known that during the war, doctors from Bosnia frequently reported three parallel malignancies on the same organism, which medicine had not registered until then. It is similar to the childhood cancer epidemic in Iraq, as well as in Afghanistan and other war zones. Significant quantities of DU uranium were found in all patients, which is used in "dirty" modern warfare and whose radioactive radiation and the radioactive particles are contaminated not only by war, but also by a much larger area.

How to deal with all these toxic substances that are inhaled from the air, absorbed by food and water, that are in the environment, in the workplace, how to prevent their negative consequences?

What can be done to live a healthy life, without fear of invisible toxins circling around?

DIVINITÁ™ is an absorbent that instantly cleanses the body and successfully and reliably removes heavy metals and other toxins from the body. Research has shown that the main threat to human health comes from exposure to heavy metals. The World Health Organization has developed extensive studies that have examined these metals and their effects on human health. The most recent studies have shown that DIVINITÁ™ has the incredible ability to remove these heavy metals from the body through the ion exchange process.

This process reduces the risk of developing heart disease and certain cancers.

POLYURIC ACID BY DIVINITÁ™

It acts like a cage, and in it there are positive ions, essential cations such as Ca, Mg, K, Cu, Zn, Fe and others, which are of great importance to the organism. These positive essential ions take the place of positively charged toxins from the body in the ion exchange process, which are then tightly bound within the crystal lattice and then completely eliminated from the body. The main advantage of this natural detoxification process is that the toxins are excreted up to 10,000. All toxins leave the body unconditionally, so they are not removed temporarily or occasionally. DIVINITÁ™ binds 40% of the heavy metals already in the gastrointestinal tract, and 60% of toxins bind in the bloodstream, at the cellular level.

DIVINITÁ™ has been proven to have the capacity to rid the body of heavy metals and cleanse them. In particular, lead, mercury, cadmium and arsenic, but also other harmful substances including pesticides, PCB herbicides, mycotoxins and other toxins that are causally linked to the development of a range of diverse diseases, including cancer and neurological disorders such as Alzheimer's, autism and dementia.

DIVINITÁ™ removes toxins from the body according to the hierarchical order. First, it acts on lead, mercury, cadmium and arsenic. This first phase lasts about 4 weeks or more. After that, DIVINITÁ™ removes other toxins that are secondary by the priority, which refers to pesticides, herbicides, xenoestrogens, mycotoxins and various other chemicals, yeasts, molds and molds, eliminating them through urine and feces.

DIVINITÁ™ helps prevent damage to the fetus

DIVINITÁ™ protects the fetus from the harmful effects of heavy metals and other dangerous toxins that may be in the mother's body.

DETOXIFICATION

It is known that an increased amount of alcohol in the blood destabilizes the normal biological process, and most adversely reflects on the liver's ability to detoxify the blood.

As a result, the metabolites become more intense, which is much more dangerous than the current problem of consumed alcohol. This is because the reduced metabolites cause a hangover: nausea, headache, discomfort, and anxiety. DIVINITÁ™ reduces the described side effects of increased alcohol consumption because it eliminates not only alcoholic but also metabolic toxins.

USE OF THE PREPARATION IN DETOXIFICATION

In the program of detoxification of heavy metals, herbicides, pesticides, nitrosamines, algaloxin, mycotoxins, radioactive substances, UV radiation, ammonia, lactate, long-term use of drugs, chemo- and radiotherapy, contraceptive pills, glucose (Diabetes), heartburn, viruses in the body.

INTENSIVE DETOXIFICATION PROGRAM

Daily intake of DIVINITÁ™ is recommended for 1.5 grams per day, divided into 3 meals. It is taken immediately before meals or with meals. It is important to increase the intake of liquid, at least 2-3 liters per day. Intensive detoxification therapy is carried out for one to two months, and in case of indications of severe forms of intoxication, therapy is recommended for up to three months. In the detoxification process, DIVINITÁ™ works selectively, eliminating first heavy metals, and then pesticides, herbicides, mycotoxins, while viral components come to an end and begin to disappear from the body on average only after 6 weeks of therapy.

In cases of severe poisoning with heavy metals, pesticides and similar toxins, it is advisable to perform a toxin analysis in the organism, possibly an F RAS analysis, before ending the intensive detoxification program.

After the intensive detoxification program, it is recommended to continue with the preventive therapy, which permanently protects the body from the daily intake of toxins, radiation, blood clots, stress and other discomforts, thus suppressing numerous infection, virus, tumor and other diseases.

USE IN CASE OF ALCOHOL CONSUMPTION

In case of alcohol consumption, the capsules can be taken before, during, or immediately after consumption, depending on the circumstances. It is recommended to take 1 capsules with water for each glass of alcohol. After drinking alcohol, take 3 capsules at once.

For people with unwanted blood alcohol levels, the recommended average daily dose is 1 capsules 2-3 times a day, which are drunk with water, before meals or with meals.

It is not recommended to take more than 6 capsules at once.

CHEMOTHERAPY AND RADIOTHERAPY

DIVINITÁ™ relieves and removes the negative effects after chemotherapy and radiotherapy, negative effects that sometimes cause these therapies to be interrupted for a certain time or even permanently. DIVINITÁ™ facilitates the toleration of chemotherapy and radiotherapy, that is, their continuation. It also significantly improves the general condition of patients and accelerates their recovery after chemo and radiotherapy.

It is recommended to take DIVINITÁ™ with chemotherapy or radiation, as it significantly contributes to the reduction of symptoms caused by these therapies and helps patients recover faster.

Private studies have shown that DIVINITÁ™ reduces the need for analgesics and narcotics and contributes to the reduction and drainage of fluid from the abdominal cavity (ascites). Some hematologic and biochemical indicators are normalized: SE, E, L, Tr, gGT, AST, ALT, where the balanced level of sedimentation is very important, the increase in the level of iron in the blood and the increase in the number of blood cells. LDH is normalized very quickly, the

diffuse lung capacity increases as well as the contractility of the heart muscle. In general, the patient's state of health improves, creating the necessary conditions for the application or continuation of chemotherapy.

DIVINITÁ™ relieves the negative effects of chemotherapy and radiotherapy, e.g. vomiting, nausea, loss of appetite, weight loss, etc. It prevents fungi in the mouth and esophagus, which is common with chemotherapy and makes recovery difficult. The general condition of the sick is visibly improving. They gain weight and, in most cases, have a need for food. In most cases, depression and insomnia have disappeared, the will to live is strengthened.

DIVINITÁ™ allows a faster improvement of the general condition in those undergoing chemotherapy or radiotherapy.

It also contributes to the elimination of fungal diseases of the skin, mucous membranes or internal organs that may arise as a result of antibiotic therapy or immunodeficiency during radiotherapy or chemotherapy, or any accompanying disease.

USE OF THE PREPARATION IN CHEMO- AND RADIOTHERAPY

It is recommended to take DIVINITÁ™ as an adjuvant and roborant with chemotherapy and radiotherapy, as it achieves adequate detoxification of the organism, alleviates and eliminates the negative effects of chemotherapy and radiotherapy, and allows a significantly faster recovery.

The recommended daily doses are at least 1.2–1.4 grams (2–3 capsules) per day.

The therapy is divided into 4 to 8 daily meals. In clinical conditions, patients receive DIVINITÁ™ in 8 daily meals every 2 hours. If such a method of intake is not suitable, the daily doses can be divided into 4 or 6 daily meals.

If chemotherapy contains heavy metals (platinum or lithium), DIVINITÁ™ cannot be taken on the day of chemotherapy until two days after chemotherapy. After that, it can be continued again with increased doses.

Thanks to the good functioning of DIVINITÁ™, many patients, who would otherwise have difficulty tolerating or not undergoing chemotherapy and radiotherapy, manage to complete the entire planned oncological therapy program.

PREVENTION OF CARCINOMA

The prevention of carcinomas is one of the greatest challenges for medicine in the 20th century. Due to increasing environmental pollution and contamination of food and water, the risk of cancer has increased dramatically. Heavy metals, as well as herbicides, pesticides, mycotoxins, and others, can be carcinogenic. The most widespread carcinogen is nitrosamine, and pharmaceuticals, additives and many other toxic substances that enter the body through food, water, air.

Due to its ability to bind positively charged toxins and thus indirectly neutralize their action, which promotes the development of cancer, DIVINITÁ™ occupies a prominent place in the fight against serious malignant and other chronic diseases.

DIVINITÁ™ has been proven to bind and neutralize nitrosamines in the digestive tract. This is of great importance, given the danger of nitrosamines found in processed foods, in the smoke of cigarettes, beer. Nitrosamines are potent and dangerous carcinogens and are responsible

for the dramatic increase in cancer risk. They are inhaled or enter the body through food, beverages, and our skin. They are consumed almost daily in meat products: bacon, sausages, salami, meat sandwiches, pizzas, canned soups and other manufactured food products. The increase in pancreatic cancer in the world is 68%, colon cancer is similar in growth. Leukemia and brain cancer also correlate strongly with the consumption of meat products.

Recently, nitrosamine has been found to be a causative factor of type II diabetes.

Although nitrosamines are highly carcinogenic, in order to be able to act on DNA and cause mutations or carcinomas, nitrosamines must first be activated by metabolism. DIVINITÁ™ can selectively remove nitrosamines from the body.

DIVINITÁ™ captures and isolates nitrosamine components from the body, preventing their biochemical action in the body. This simple operation of DIVINITÁ™ has the potential to save and protect the lives of millions of children and adults around the world every year.

The prevention of different types of carcinomas is listed under the heading "detoxicator", i.e. DIVINITÁ™, the most effective known "detoxicator".

ANTICARCENOGENIC EFFECTS

DIVINITÁ™ has a rare ability to keep a huge number of positively charged ions in its microporous structure, ions that are the causative agents of carcinoma. Not only does DIVINITÁ™ directly neutralize their carcinogenic effect, but another process of anti-cancer activity takes place. Due to the attraction of positive substances that surround the cancer molecule, DIVINITÁ™ gradually develops a positive charge and eventually becomes positively charged as a whole. He is then attracted to the carcinogenic membrane, which is negatively charged. In particular, certain cell genes are activated, for example the p21 gene, which regulates the progression of the cell division cycle (apoptosis) and is important for the function of tumor suppression.

Activation of this cell gene stops tumor growth by direct suppression of the growth signal, which has the effect of preventing carcinoma, from slowing and stopping growth to patrial and total remission.

Tumor cells thrive in an acidic environment and successfully escape detection from the immune system. DIVINITÁ™ has a pH value of 8.4, so that when the malignant cells are in such an elevated alkaline environment, they no longer have a chance to multiply and gradually begin to die after 6 weeks.

By investigating the immune-stimulating effect of DIVINITÁ™, it appears that it behaves like superantigens, and it is possible to speak of the supervaccine as a kind of immune-stimulating action, which is of particular importance in the adjuvant treatment of autoimmune, infectious and malignant diseases. Superantigens are proposed as a group of bacterial and viral toxins, which can cause cell death in T cell populations. Superantigens can improve or reduce immunological responses to a large number of antigens that occur in most diseases, especially autoimmune diseases.

Topical application of DIVINITÁ™ in skin cancer reduces the formation and growth of tumors. Vitro cultures show that DIVINITÁ™ possesses protein kinase B (c-Akt), stimulates the development of p2j WEF1/ClP1 and p37K1P1 tumor suppressor proteins, and stops the development of cancer cells on multiple cell lines.

IMMUNOSTIMULATOR

The human body's immune system is an extremely complex and intelligent metabolic system that protects and maintains the integrity of the organism. It consists of an army of specialized cells, delivery molecules, and biological memories that recognize, distinguish, destroy, and eliminate a large number of invaders, abnormal cells, and all foreign substances and microorganisms that attack and infect the body. Made up of white blood cells, lymph nodes, and antibodies, the immune system's complicated detectors constantly battle thousands of aggressive toxins, viruses, bacteria, fungi, and parasites that can damage any part of the body.

The immune system is also very important in detecting mutations in the body, e.g. induced tumor carcinogenic cells or toxic chemicals that arise as metabolic byproducts or are absorbed from the environment. And finally, the immune system is activated in various injuries, so it plays a vital role in the repair of damaged tissue, the healing and the maintenance of general hemostasis in the body.

It is indisputable that the immune system is absolutely crucial to human health, because without its support, a human being cannot survive for more than a day or two.

The normal immune system of modern humans usually does not function as optimally as it should, due to a number of circumstances: stress brought about by the modern way of life, the reduction in the nutritional value of foods, the exposure to chemicals and toxins in the food one eats, the air one breathes, the water one drank and ingested medicines.

DIVINITÁ™ plays an important role in balancing the immune system. As is well known, DIVINITÁ™ removes toxins from the body, especially heavy metals.

Magnesium, which is stored in the body, can interact effectively with the metabolic energy source. When this interaction occurs at an optimal level, people feel the natural flow of increased energy and vitality, heightened concentration, and mental clarity.

There are several disorders of the immune system that cause numerous autoimmune diseases. It is known that malignant diseases and HIV do not involve sufficient activity of the immune system. Rheumatoid arthritis, on the other hand, is due to excessive activity of the immune system. DIVINITÁ™ modulates the effects of the immune system, improves and stimulates the immune system to work more efficiently, harmoniously and balanced, and contributes to both types of immune disorders, i.e. DIVINITÁ™ is an immunomodulator.

DIVINITÁ™ does not directly stimulate the immune system, but allows it to function optimally by eliminating all harmful substances that reduce immune function and burden hormonal activity.

ANTIOXIDANT EFFECT

DIVINITÁ™'s cage structure attracts and removes free radical molecules, resulting in reduced cell damage and making DIVINITÁ™ an effective antioxidant. Traditional antioxidants reduce the energy of free radicals and interrupt chain oxidation reactions, while DIVINITÁ™ attracts and traps free radicals in its complex structure, deactivating them and then removing them from the body. In this way, DIVINITÁ™ can significantly accelerate and complement the action of traditional antioxidants.

ANTIVIRAL AND ANTIALERGIC EFFECTS

Although a whole range of microorganisms have the ability to damage the organism, viruses are extremely harmful and are considered the most undesirable intracellular parasites.

Viruses reduce the self-reproducing capacity of the cell, because they extract the nutrients needed for reproduction from the cells and use them for their own reproduction, i.e. for the replication of the virus. Viruses cause a large number of diseases that can have obvious diagnostic symptoms, although this is not necessary. In many cases, the symptoms can disguise a real diagnosis or lead to other diseases. Finally, some viruses target specific tissues, organs, or systems in the body and can cause localized infections, such as a sore throat or general infections such as the flu.

With so many microorganisms and viruses constantly bombarding the body, medical drug therapy is becoming less and less effective, as well as causing additional problems with the immune system. Therefore, the use of DIVINITÁ™ in such cases is justified and successful, because DIVINITÁ™ not only increases the strength of the immune system, but at the same time directly removes the viral components from the body.

It is known that viruses arise from individual components, i.e. parts such as in a production line. It is only at the end of the production process that the entire virus has built up. By binding pre-viral components, DIVINITÁ™ prevents viral replication and switches on a number of viral infections to develop in the body. DIVINITÁ™ absorbs viruses into their pores, allowing the body to effectively remove them from the body through urine, feces, or sweat.

REGULATE PH; ACID-BASE BALANCE

The balance of acids and bases, expressed as pH value, protects the body from many diseases of today's civilization. To ensure the protective function of the blood in the body, the most optimal pH value is about 7.4.

An acid-base imbalance can lead to disorders of the musculoskeletal system, painful back pain, osteoporosis, rheumatic diseases, including arthritis, rheumatoid arthritis, spondylolisthesis, discopathy and sciatica, gastritis, intestinal inflammation, cramps, disturbed intestinal flora, candidiasis, chronic fatigue, drowsiness, lack of energy, depression, excessive nervousness, cardiovascular disease, low blood pressure, cardiac arrhythmias, headaches, migraines, caries, paradentosis, kidney imbalance, gout, decreased endurance and muscle stiffness, low pain threshold. Acidic pH also creates a condition for the development of cancer and for the destruction of brain cells with consequences in the form of depression, anxiety, dysfunction, even psychosis.

Due to the modern way of life, most people have an over-harvested organism. The average diet contains too much meat, sugar, starches, and refined carbohydrates, which are known to be high-acid foods. People don't drink enough water, and water alkalizes the body. The body also reacts with an overproduction of acids in numerous situations: when using alcohol, cigarettes, stress and lack of exercise, in a polluted environment and various factors of demineralization of the organism, with colds, in women during the menstrual cycle, when consuming a lot of sweets, because sugar is known as the "thief" of base.

To neutralize excess acid, the organism consumes minerals, including calcium, magnesium, potassium, iron, zinc. Hidden culprits are therefore responsible for the problems of the tooth and the development of caries, namely an excess of acid and a shortage of bases. Fatigue and insomnia are often a reflection of the increase in acidity in the body. With increased

acidity, the body can also react with severe pain. Acid is one of the most common digestive problems. The imbalance between acids and bases is a common cause of inflammation of the gastric mucosa. It is assumed that as a counterbalance to a certain amount of meat, a sevenfold amount of vegetables must be taken in order to establish an acid-base balance.

Acids enter the organism through food, but certain acids are produced by the liver, pancreas and stomach. For proper digestion, for the secretion of harmful and superfluous substances without fermentation and bloating, the contents of the stomach and intestines must have a balanced pH, half acid and half base.

Any increase in the acidity of the body, i.e. in the pH value, affects not only the numerous metabolic and digestive functions of the body, but also the functioning of the brain and the immune system. An acidic pH also creates the conditions for the development of cancer and other dangerous diseases, such as candidiasis and chronic fatigue.

Balanced pH levels contribute to the destruction of candida, which belongs to the group of fungi that naturally exist between the intestines and the intestinal mucosa. Taking antibiotics, contraception, hormonal and immunosuppressive therapies can cause an uncontrolled candida bloom. The consequences are unpleasant local infections, as well as possible disorders of intestinal function. If the candida is present in the body for a long time, the walls of the digestive organs become infected with toxins, as the intestines become permeable to all kinds of harmful substances and allergens from food. These toxins prevent the development of friendly bacteria and difficulties increase.

DIVINITÁ™ not only directly destroys the candidate, but also removes the toxins it causes in the intestines.

To prevent diseases that develop in an acidic environment, it is necessary to neutralize acidity and restore the pH balance. DIVINITÁ™ acts as a protective system because it binds excess acid and removes it from the body. This causes an increase in pH in the sense of an increase in alkalinity. DIVINITÁ™ has the ability to balance acid-base balances, as it sets the pH value between 7.35 and 7.45.

When the pH level in the body is optimal, proper metabolic and digestive functions take place, brain function improves, and the immune system works under ideal conditions. In this way, DIVINITÁ™ directly prevents and helps with the indicated number of difficulties and diseases, which are due to the increased acidity of the organism.

DIGESTION, DIARRHOEA

Digestive disorders have become a very widespread health problem. Foods with a lot of industrially processed foods, reduced nutritional values in fresh fruits and vegetables and fast food foods are the cause of our digestive system being constantly under attack. There are more and more problems due to abdominal cramps, bumps, diarrhea, constipation, which can irritate the intestines and cause intestinal syndromes and abnormal functioning of the gastrointestinal tract. These conditions affect all ages, races, and genders, and nearly 2/3 of patients are women.

The gastrointestinal tract consists of a small intestine that connects the large intestine with the rectum and anus. The intestines function by absorbing water, nutrients, and solids from digested food. After the absorption of nutrients, the intestine provides peristaltic movement and regular defecation. Muscles contract, and as a result of the movement of the bowel, the bowel contents go to the rectum. However, the muscles of the intestines, sphincter and pelvis

do not always contract optimally, preventing proper and timely bowel movements, resulting in pain, cramps, constipation or diarrhea. Patients often seek medical advice to alleviate symptoms, but in many cases, medication is not the best answer. Some medications can even cause addiction, and in some cases, there are side effects.

People who suffer from gastrointestinal disorders often experience their problems from managerial stress, and in addition to relaxing the body, they are advised to make certain dietary changes, e.g. to take more water and natural substances that help them in the peristalsis of the intestines and the regeneration of the gastrointestinal tissue. The deficiency of nutrients in the modern diet and its insufficient absorption also lead to chronic diseases, especially in the elderly.

HOW DOES DIVINITÁ™ WORK IN THE GASTROINTESTINAL TRACT?

Due to the described properties of the ion exchange, DIVINITÁ™ can change, change the ion content and pH value in the body, thus contribute to the protection of the gastrointestinal tract. It also stimulates the absorption of nutrients, improves the effectiveness of the normal flora in the digestive tract, and improves the transport of nutrients in the epithelium of the intestine. By improving nutrient absorption, DIVINITÁ™ reduces the risk of malnutrition, that is, chronic and serious diseases, even without altering food intake. Finally, DIVINITÁ™ stimulates the secretion of cytokines, a component of the immune system that ensures a healthier and more efficient digestive tract. It also improves the immune response of the digestive system by removing "bad bacteria," and it stimulates the growth of beneficial flora and fauna and "friendly bacteria" in the digestive tract.

DIVINITÁ™ not only improves nutrient utilization, but also conserves energy and reduces damage to the cell epithelium. Since DIVINITÁ™ substances are negatively charged, they attract and bind positively charged substances, including ions of ammonia. Ammonia is a cellular toxin that can damage the epithelium of the gastrointestinal tract and directly and negatively affects the digestive process and is generated from the protein during this process.

Reduction of ammonia allows regeneration of the intestinal epithelium, energy savings and better utilization of nutrients. Therefore, the use of DIVINITÁ™ protects and restores health and the body in this area.

LIVER DISEASE

DIVINITÁ™ can be used as adjuvant therapy in hepatitis, tumor and cirrhosis of the liver. In mononucleosis, DIVINITÁ™ has a significant antiviral effect, including in hepatitis C, where administration of DIVINITÁ™ has responded positively.

People with hepatitis C show a decrease in viral levels in the blood, faster regeneration of the liver, and eventually disappearance of the virus.

CARDIOVASCULAR DISEASE

DIVINITÁ™ prevents cerebral and cardiac arrest, increases the contractility of the heart muscle and contributes to the normalization of the heart rhythm, either through the reduction of extrasystoles or the cessation of tachycardia; contributes to the regulation of blood pressure, stabilization and optimization of the functioning of the cardiovascular system, with a reduction in tension. Contributes to the permeability of the veins, the reduction of oedema, hypertension and thrombosis, as well as to the strengthening of the heart muscle and accelerated healing after an infarction.

LUNG DISEASES

DIVINITÁ™ increases the diffusion capacity of the lungs and makes a positive contribution to adult respiratory stress syndrome, asthma, cystic fibrosis, pulmonary emphysema and bronchopulmonary dysplasia.

DIABETES

While DIVINITÁ™, as an ion pump, removes excess proton and balances the body's pH, at the same time, according to the same principle, contributes to lowering blood glucose levels and prevents the onset of diabetes complications. DIVINITÁ™ transports sugar without insulin resistance and contributes to diabetics remaining insulin independent for longer.

NEURODEGENERATIVE DISEASES

DIVINITÁ™ helps with diseases of the central nervous system and neuromuscular disorders. It calms tremor, regulates muscle tone, relaxes muscle spasms and pathological reflexes, and helps treat Parkinson's disease, rheumatic diseases, osteoarthritis, and helps reduce the frequency and intensity of seizures. DIVINITÁ™ removes heavy metals and other toxins that are causally linked to the development of neurological disorders such as Alzheimer's, autism and dementia. The use of DIVINITÁ™ in multiple sclerosis leads to an improvement in the condition as early as the second week of intake. Young patients in the early stages of the disease and neurovegetative dystonia respond particularly well. In the terminal phases, where foci have developed in the brain, the results are much more modest. A beneficial effect is achieved in muscular dystrophy, even in the earlier stage of the disease.

OSTEOPOROSIS AND BONE HEALING

DIVINITÁ™ increases bone density, has a beneficial effect on bone structure and bone formation, and therefore contributes to osteoporosis and postoperative and other bone healing. It increases the proliferation and differentiation of osteoblast production and increases bone density. Due to its ability to simulate bone structure, DIVINITÁ™ is also used in connective tissue diseases, in particular collagenosis, rheumatoid arthritis, lupus erythematosus, and fibrosis and sygrenus syndrome. It helps reduce joint pain.

GYNECOLOGICAL INFECTIONS

The application of DIVINITÁ™ in gynecology has shown very favorable results in various bacterial and viral infections, including HPV, and CIN levels.

HORMONAL ACTIVITY

DIVINITÁ™ harmonizes and improves glandular activity with internal secretion, in particular the activity of the lymph nodes.

MOOD

DIVINITÁ™ successfully removes various types of toxins from the body, naturally increasing energy, improving psychophysical well-being, improving mood, and eliminating insomnia, neuroses and depression. Research has shown that DIVINITÁ™ harmonizes the production of a neurotransmitter called Serotonin, a well-known "hormone of happiness", which influences emotions, behavior and thoughts and which, when balanced, provides a sense of pleasure and mental relaxation, and is especially important in the regulation of abnormal mental

states, such as depression. DIVINITÁ™ also relieves problems in menopause. Many users of DIVINITÁ™ express the feeling of increased energy, concentration, mental clarity, vitality, better mood, sense of peace and contentment. These are called positive secondary effects, because by removing heavy metals, the body can retain magnesium and the body then functions successfully, with an increased biological source of body energy. When this interaction occurs at the optimal level, people have the sense of their own energy and feel good.

HARMONIZATION AND LITERACY

DIVINITÁ™ contains the essential elements necessary for the optimal functioning of healthy cells, so it is effective in preventing premature aging. It contains micro and macro minerals that have a unique, slightly alkalizing pH value, which is very important for vitality. Many people age prematurely due to the accumulation of toxins that hinder optimal metabolism for normal cell renewal. DIVINITÁ™ removes toxins that put a strain on the body so that the body is restored and regenerated normally. DIVINITÁ™ repairs DNA and provides the body with the essential substances and amino acids necessary for the assimilation of vitamins, minerals and other nutrients. In this way, it stimulates metabolism, strengthens the immune system and allows the body to fight off pathogens and infections. Therefore, this 100% natural mineral acts as a combination of numerous elements and is a product of state-of-the-art scientific pharmacological technology, but does not contain any additives or chemical reagents.

DIVINITÁ™ IN SPORTS

Professional athletes are included in the group of healthy individuals with special physical demands, because they are exposed to extremely heavy training, competition and psychological tension for performance, which causes strong oxidative stress. As an alternative to taking synthetic preparations of vitamin, steroids, hormones, it is advisable to take natural antioxidants that allow you to exceed human limits with increased sports results.

Our studies and sports research have shown that activated DIVINITÁ™ in athletes has an impact on the reduction of the percentage of lactates, the reduction of free radicals, faster regeneration, greater endurance, more noticeable success in competitions and a general improvement in the overall psychophysical condition of athletes.

Products based on activated DIVINITÁ™ contribute to increasing the body's endurance in the face of increased physical exertion and also to the reduction and disappearance of muscle pain caused by increased physical exertion, which is of particular interest to this category of consumers.

The study data, applied to 24 active athletes, demonstrated DIVINITÁ™'s exceptional ability to reduce lactate. Athletes who took activated DIVINITÁ™ had an average efficiency of 13.98% and a maximum of 26% (at a level of 2 mmol/l lactate), confirming the unique capabilities of DIVINITÁ™. Its practical efficiency and effectiveness is confirmed by personal statements from almost all categories of professional European athletes.

DIVINITÁ™ therefore becomes an unavoidable partner in training and a reliable companion for world competitions. It meaningfully improves the psychophysical and health status of athletes, and has been proven to contribute to more sportsmanship and achieved results. Regular use of DIVINITÁ™ also acts on the entire detoxification process of heavy metals, ammonia and a whole series of dangerous toxins that endanger the health and vitality of modern man, prevents stress and numerous health problems, and is recommended not only

for athletes, but also for all active lifestyle individuals and for people exposed to increased daily stress.

DIVINITÁ™ mainly results in:

- Reduction in lactate percentage
- Free Radical Reduction - Faster Regeneration
- More endurance
- More success in matches for strikers.

Products based on brown algae are 100% natural products, without additives, contraindications and side effects. They do not contain any substances or additives that violate anti-doping regulations.

SCIENTIFIC STUDIES IN SPORT

A double-blind study, in which 24 athletes participated, showed startling results:

"DIVINITÁ™ has a unique ability to reduce lactate concentration. After conducting lactate tests with athletes who had participated in this study, we saw that the group that had taken DIVINITÁ™ had significantly better sports outcomes, with significantly lower lactate levels compared to the placebo group. We were really surprised by the results of these tests, because such good sports results are usually only achieved after a few weeks of training by athletes. This indicates that, as the tests show, the intake of DIVINITÁ™ continuously significantly improves sports results. "
